

I-95 Piscataqua River Bridge Rehabilitation

PORTSMOUTH, NEW HAMPSHIRE & KITTERY, MAINE

▶ Daily traffic counts rise to 130,000+ in the peak summer season.

▶ First use of the Road Zipper System® in northern New England.

As the only interstate highway connection between New Hampshire and Maine, the 4,503-foot-long I-95 Piscataqua River Bridge is vital to commerce, commuters, and tourists. Despite the bridge's massive size and the immense rehabilitation, the greatest challenge was keeping traffic moving continuously. TYLin evaluated **hourly** traffic for **every** day of the year and developed an innovative Maintenance of Traffic scheme. With the Road Zipper System®, work shifted quickly and safely based on traffic levels. The solution achieved client goals ahead of schedule.
