

# Allenstown Community School

Allenstown, NH

The Turner Group (TTG) is proud to present the Allenstown K-8 Community School, a \$32 million project that replaced two outdated facilities with a modern, sustainable campus. Serving as both an educational center and a vibrant community hub, the school reflects local values through thoughtful design, innovative engineering, and a focus on connection. Completed on time and on budget, it embodies TTG's commitment to building a better future for Allenstown.

## Energy Efficiency

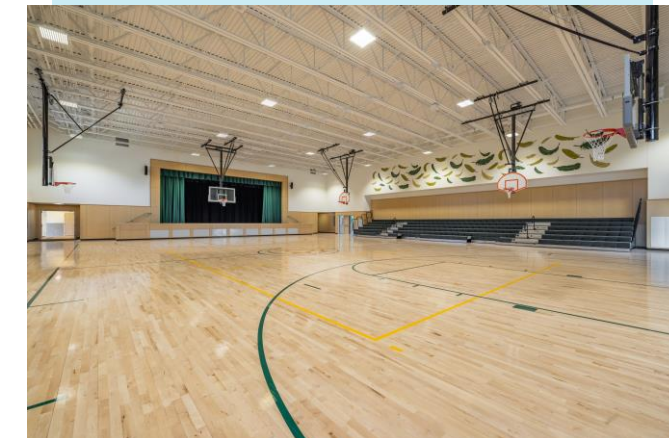

The Allenstown K-8 Community School sets a high standard for energy efficiency with smart design choices like a displacement air system with dehumidification, cutting energy use by reducing reliance on traditional air conditioning. Solar panels supply about 70% of the school's electricity needs, and insulation levels go far beyond code requirements. Together, these measures save energy and reduce emissions, making the school both cost-effective and environmentally friendly.

## Community Impact

This new school is much more than a place to learn - it's a gathering place for the entire Allenstown community. Thoughtfully designed with input from local residents, it provides spaces for learning, recreation, and wellness. Whether hosting student performances or community events, the school has become a source of pride and connection for Allenstown.

## Collaboration Success

Completing this project during the height of the COVID pandemic was no small feat. TTG worked closely with the owner's project manager Gordon Bristol Milestone Construction, Wilcox & Barton, Inc., and Yeaton Associates to navigate supply chain disruptions and rising material costs. Thanks to the strong collaboration between all partners, the school was delivered on time, on budget, and with every detail thoughtfully executed.
